Mr. & Mrs. Shields 2838 Shadow Roll Court Glenwood, Maryland 21738

> RE: Glenwood Springs - Lot 24 Shadow Roll Court Well Tag No. HO-81-2632

Dear Mr. & Mrs. Shields:

This is to advise you that the septic system was installed, inspected approved on May 31, 1989.

The water sample recently submitted for testing was free of coliform and fecal coliform bacteria at the time of sampling and is bacteriologically safe for drinking.

The nitrate sample result was previously documentated to be 12.5 parts per million. A nitrate device has been installed to treat the previously documented excessive nitrate contamination. The nitrate removal system appears to be operating properly as evidenced by the recent water sample taken on May 22, 1989.

COMAR 10.17.13.09 prohibits approval of any water supply with a nitrate-nitrogen contaminant level in excess of 10 parts per million. This department will grant a permanent deviation to that section of the regulation on condition that the nitrate removal system effectively maintains the nitrate-nitrogen contaminant level below the 10 parts per million requirement.

Furthermore, it will be necessary for you to continue to comply with the following conditions:

- The system must be properly operated and maintained continuously, in accordance with the service contract for the life of the residence. You must supply this department with a copy of that contract.
- 2. It is recommended that a nitrate analysis be performed.
- 3. If, in the future, you decide to sell or rent your home, you must make any potential buyer/tenant aware of the above conditions.
