RE: Percolation Testing  
Parcel 179 Tax Map 16  
Buksa Proprty  
Thompson Drive

Dear Mr. Bassler

Percolation testing conducted March 13, 1987 on the above referenced property indicated satisfactory soil conditions..

Approval of the lot is contingent upon submission by a registered engineer of a plat showing certified test hole locations and a suitable house and well site.

This should be submitted within sixty (60) days to allow field verification if necessary.

If you have any questions regarding this matter, please feel free to contact me at the above address, or by calling 461-9933.

Very truly yours,

A handwritten signature in cursive script that reads "Craig Williams".

Craig Williams, Director  
Water and Sewerage Program

RE: Percolation test approval  
Buksa property  
Tax Map 16, Parcel 129

Dear Mr. and Mrs. Cichetti:

This is to again advise you that percolation tests and the concurrent approval as a building lot have been approved for the above referenced property.

In the meeting of April 15, 1987 with Bureau of Environmental Health staff, Mr. Dave Kerr of the Division of Residential Sanitation, Office of Environmental Programs and Mr. David Bassler, the developer, the reasons for our approval were discussed with you.

On June 1, 1987 you met with Mr. Craig Williams and Mr. Frank Skinner of our Bureau of Environmental Health to again discuss our reasons for approval and your concerns about the impact of the proposed sewage disposal system on your existing well's water quality.

Having reviewed all available information, I find that the concerns you have raised were adequately taken into account during the testing of this parcel. The area under consideration for a sewage disposal easement is located on higher ground than the installed septic system on your lot. All indications are that the upper limit of the water table in that area is at least as deep as the water table under your septic area. In that location, you have indicated your repaired septic system has functioned satisfactorily for more than twelve (12) years.

Mr. and Mrs. Daniel Cichetti

- 2 -

June 10, 1987

Additionally, the location of the proposed sewage easement, although higher than your well, is not considered a threat to your well. This area is not in a predicted line of flow toward your well and is farther from your well than your own septic system. The soils above the water table, in the treatment zone, are a fine silt loam with negligible coarse fragments. This is a material which is considered to provide excellent sewage treatment.

Should you wish to appeal this decision you may do so in accordance with the attached procedures.

Very truly yours,

Joyce M. Boyd, M.D.
